4. Availability of stock registers as provided by government departments.
5. Complete product wise details of in and out of your stocks.
6. Exclusive control on the credit customers.
7. Data mining service for the complete information to the customers.
8. Software designed by latest technology.

Dear Petrol Pump Owners,

From last many years you had been running your retail outlet business very efficiently and had been successful on its every front. But due to increasing business, competition today you have to think only and only about customer satisfaction because of which you will have to concentrate maximum on customer services which is need of the hour.

From last few years bbnisys Technologies (P) Limited is active on the fore front of developing quality software to provide services to its valuable customers and is registered with Software technologies Park of India (Govt. of India). We are Attached with retail petroleum business from last 40 years and are well versed with all the difficulties and problems of the business. After in-depth analysis of these problems we have got highly technically equipped multipurpose, petrol and gas station management system, "ePetro," which will give more sophistication to all your business activities in a very short period. Its main aim is to systematically channelize your important government registers, billings, purchases, tanks, machines, nozzles, staff, logistics, accounting, customer credit, customer data mining and many other benefits without any pauses and hurdles.

It is chiefly developed for 3 tier work systems like Operation, Accounting, Customer Service (OACS).

Today mostly available software in the market completely focus on accounting but we have a different view in this regard. We believe that operation system must be perfect and secondly our main attention should be on customer services. If we have a good operation system then only our maximum customers will be satisfied and it is only just the customers' satisfaction which will reach our sales graph to the peak value. The accounting will be of no use if the number of customers keep on decreasing day by day. Due to this we had kept the accounting as a last subject which only reflects the ratio of profit and loss. Here is a brief presentation of our (OACS) work system for you to understand and know the facilities provided by it about how and to what extent will it provides customer satisfaction and your better retail outlet management.

OPERATION

This is the best medium for completing your daily/ weekly/ monthly/ annually retail outlet operations. In this all the Indian oil companies, petroleum ministry and government operation records along with different types of required reports and registers well featured. Because of this, all your data and records are very secured in a system.

IMPORTANT FEATURES

Highly secured connectivity between nozzle, machine and tank.

With the help of daily entry form you can update your various registers like D.C.R., Density registers, Government stock registers and meter reading which can be accessed in future for any date within few seconds.

Stock movement register and stock list can present and print even the minute details of your stock within seconds.

"Product-wise sales," "Customer-wise sales," can present and print even the minute details of your product and its sales with in seconds

"The rate list" in a very efficient way can update and print your purchase and selling rate.The system facilitates you with such a report which will provide you old rates according to the dates, with the help of which you can very meticulously check the rate list and get rid of the rate difference, problems in your business.

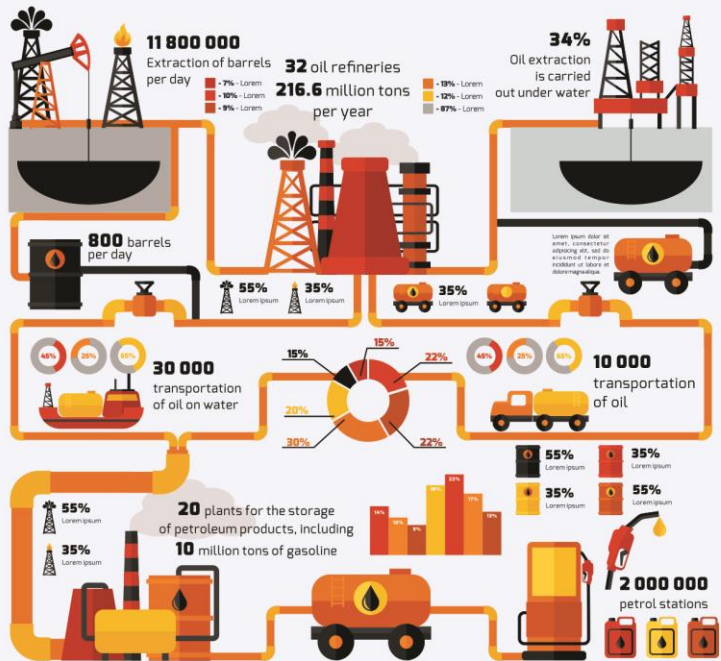

Logistic Module will provide you with the information about the maintenance of vehicles used in daily business, along with its R.T.O. License Validity, Explosive license validity, insurance validity. The module will also help in the detailed analysis of the expenses on transportation and vehicles. Apart from this you can also know the mileage of your vehicles by the Logistic module.

ACCOUNTING

This module is prepared with an in depth study and by the discussions, suggestions with many retail outlet owners. Though there are many accounting software available in the market, but they are not according to the needs of petrol and gas stations. The petrol and gas station business is different from the other business. In this, turn over is very large but simultaneously profit is very less and in today's competitive age credit is a very large medium to attract customers. To anchor the customers we had specially attended the consumer and supplier transaction and had tried at the level best that after purchasing our software, any of the petrol and gas station proprietor will be able to eradicate and wipe out even the smallest calculative losses like Purchase invoice calculation, Bulk sales invoice with discount billing and rate list updating.

IMPORTANT CHARACTERISTICS

- A. Customer wise bill aging
- B. Sales register
- C. Purchase register
- D. Vat report
- E. Credit and Debit note
- F. Sales and Purchase return credit note
- G. Stock adjustment voucher
